

GNLD HOMECARE

Who enjoys cleaning?

It simply is a part of life that all of us undertake, yet rarely, if ever, enjoy. So when the chore of doing the washing, cleaning the house, office, car or whatever it might be arises, you might as well make it as easy for yourself as possible.

GNLD has a range of 3 unique and effective Home Care products that will make the cleaning duties in your life that much easier.

The GNLD Home Care range has 5 distinctive benefits that cannot be matched by other cleaning brands:

- **100% Biodegradable** - When GNLD introduced its first “biodegradable” cleaners over 40 years ago, it was ahead of its time. We virtually invented the concept! Biodegradable refers to products that can be broken down into simpler, safer by-products by living organisms. GNLD stipulates that all ingredients used in the formulation of any GNLD cleaning product be compatible with nature’s own life cycle. This cycle of birth-growth-death-decay-rebirth is basic to our formulating philosophy. The process of biodegradability depends on time, temperature and concentration and under standard conditions in Australia, must be 80 per cent complete within a maximum of 21 days. GNLD’s commitment to the environment means it has always exceeded this standard.
- **Versatility** - Just one GNLD Home Care product can do the job of several other ‘leading’ brands. This reduces the quantity of products needed by the consumer as well as simplifying their cleaning tasks.
- **Economy** - Because of the versatility and the fact that our Home Care products are formulated as concentrates, economy becomes a predominant feature. GNLD’s high concentration cleaners means one GNLD product can equate to 11 bottles of other competitor brands. This elimination of multiple household cleaners translates into savings for the household budget.
- **Performance** - Because of unique, time-proven formulations, our products have amazing performance results. Competing products find it almost impossible to compete with the performance GNLD’s Home Care products provide.
- **Completeness** - The GNLD Home Care range performs a complete chemical cleaning process on each job it encounters. GNLD products can be used for most cleaning applications at home, commercially and at industry level. All GNLD’s Home Care products, whilst being extremely effective, are also very safe to use in the family household environment.

GNLD’s Home Care products provide a complete, safe and effective range of cleaners that are suitable for personal, light and heavy duty use and guarantee a clean and hygienic result.

GREEN

Green is a remarkable liquid cleaning concentrate that thoroughly, yet gently, dissolves dirt. With a neutral pH, it is fully compatible with the skin, which makes it an ideal personal care cleanser. Green is used just like soap and is ideal for washing hands, body and hair without leaving any sticky, irritating residue and won't dry your skin like many other cleansers can.

Green is gentle and effective yet versatile enough to use as both a personal and household cleanser!

Containing Kelpro, an exclusive organic, kelp-derived protein base, Green is also 100% biodegradable.

Green eliminates the need for many other cleaners and can achieve a multitude of chores without damaging the environment.

Just take a look at how Green can help you around the house:

Personal Cleaning

Bathroom: Replaces all your soaps. Green gently cleanses your body leaving it feel soft and clean and won't leave scum or soap stains in the bathtub or shower.

Hands: a) Place a small drop of Green onto hands, rub together (GNLD calls it our 'green glove') and allow to dry. You can then commence your chores of gardening, working with dirty oil and grease or any other task that is bound to make a mess and be confident that you will be able to wash off the dirt and grease easily.

b) After cutting or preparing onions, fish or meat place a few drops into the palm of your hands and rub thoroughly, then rinse. Odours associated with these foods will have completely disappeared!

Hair: Anecdotal evidence that washing your hair with green may prevent and control hair lice.

Household Cleaning

Fabrics (including fine fabrics, nylon, silk and woollens): Immerse in cold water with a few drops of Green, rinse and lay to dry.

Ironing: A few drops in your steam iron keep the jets and interior clean.

Nappies: Use Green in a bucket of water and let nappies stand prior to washing. Odours are eliminated.

General Cleaning

Dogs: Just use 1-2 tsp of green and wash as normal. Coat will be soft, shiny and clean and won't irritate the skin.

Chewing Gum Removal: Use full strength to remove from carpet or clothing.

Eyeglasses: A couple of drops of Green on a wet cloth will remove fingerprints, dust and grime. Rinse glasses then polish with a dry cloth. They will look like new!

Plants and shrubs: Spraying will help prevent some diseases and insects from damaging your plants and shrubs as well as help promote healthy blossoming of roses and flowers.

LDC - LIGHT DUTY CLEANER

Gentle, yet extremely effective, LDC cleans the finest fabrics through to the dirtiest of dishes. Its super concentrated formula means it will last for ages, cleaning the greasiest pots and pans through to delicate, hand washable clothing. Concentrated and economical, just a few drops can do a whole sink full of dishes.

Enhanced with the fragrance of flowers, LDC is great for cleaning anything that needs a little extra care, such as crystal, sterling silver and fine china. It is made from a balanced blend of non-ionic surface active agents, reacted coconut oil amides, neutralised organic acids, skin conditioners and hard water ion chelators. Phosphate-free and 100 per cent biodegradable, environmentally friendly LDC will not pollute waste water.

The surfactants or "surface active agents" in LDC act to reduce the surface tension of water. Surface tension is the reluctance of water molecules to break apart. This is why small soil particles, fabric or string appear to lie on top of water and never get wet. The three surfactants in LDC dramatically reduce the surface tension in the water, making the water "wetter". Because of this, the fabric is penetrated quickly and thoroughly, the cleaning water comes into direct contact with the dirt particles, and cleaning becomes that much easier. LDC easily penetrates the dirt and quickly begins to emulsify (suspends oil and dirt in water) and solubilise it (the drawing out and collecting together of all dirt particles). When some mechanical action, such as scrubbing, is added, the dirt is lifted off the surface of the dish or fabric and becomes totally entrapped in the cleaning water.

Even though LDC is effective on the toughest of cleaning tasks, it is very easy on your hands. The coconut derivatives help keep it gentle to the skin. Rub in a drop or two on your

hands and you will notice how your hand becomes soft, smooth and satiny.

Here are just a few household cleaning uses of this versatile product:

Dishes: Use one healthy squirt of LDC under the force of running water to make lots of bubbles. In hard water you may need a little more. Dishes drain spotless. LDC is mild on your hands so you do not need rubber gloves. When washing greasy dishes, LDC will not only remove the grease, but also keep it in suspension so that it is flushed down the drain. No more messy deposits to wash away from the sides of the sink. Perfectly safe for china, crystal, silver and other delicate items.

Fabrics (all fine fabrics - nylon, silk, rayon, cotton, lycra, polyester): One generous squirt of LDC (1:3 mixture) into a basin of cold water provides a gentle but highly effective wash.

Flowers: Cut flowers will last longer by adding a squirt of LDC (1:3 mixture) to water in the vase.

Grease: Squirt LDC (mixed 1:3) onto greasy surface. Leave and simply wipe clean.

Laundry: A few millilitres (mls) of LDC can increase the penetrating power of the laundry detergent you are using now, providing extra power on stubborn stains. In hard water areas, LDC gives your laundry detergent that little extra strength so tough grease, tar or wax stains may be easily removed. Not for use in front loading machines.

Sinks & Baths: Clean with LDC (1:3 mixture). LDC rinses away completely, leaving no remaining film and eliminating the need for a gritty abrasive.

Weeds: Mix one cap of LDC concentrate with weed killer in a litre-sized spray bottle. Spray weeds. LDC helps to penetrate the ground better and carry the weed killer to the weed roots.

SUPER 10

The all purpose industrial strength cleaner, Super 10, is a non-inflammable, non-volatile product that will not cause or create foam in rivers and streams.

A balanced combination of reacted organic soap, mild solvents and a super wetting detergent means it can be used for a wide variety of cleaning problems. Concentrated with a unique triple action to penetrate, dissolve and emulsify, its cleaning power lasts longer and costs less.

Because of Super 10's versatility, this one product eliminates the bother and the expense of having a variety of special cleaners. It dilutes instantly in any amount of cold or hot water, hard or soft and contains no free alkalines, kerosenes or hydrocarbons.

Super 10 gives you extra cleaning power with its unique Triple Action Formula:

- Super 10 penetrates the spot or stain and gets between the surface and the dirt.
- Super 10 dissolves it, breaking up dirt and grease for easy removal.
- Super 10 emulsifies it into the cleaning solution for easy removal by rinsing or wiping.

Super 10 makes water "wetter" for faster action, using a combination of non-ionic wetting agents, organic solvents and natural soaps. It's unique triple action formula gets between the surface and the dirt for superior cleaning and has a nice, refreshing fragrance that lets you know its clean.

Super 10 is the one cleaning concentrate that replaces a cupboard full of ordinary cleaners, and does it more effectively and economically.

Look how this powerful and versatile cleaner can make your life easier:

Carpet (also upholstery & fabrics):

Test for colourfastness before use. Freshly spilled spots - blot up excess with a clean cloth to take up as much as possible. Spray lightly with Super 10 (1:10 mixture). Wait two or three minutes until it absorbs stain. Blot again with absorbent cloth. Repeat if necessary. For stubborn stains, agitate with fingers or brush.

Driveways & Garage Floors: Spray grease or oil spots with Super 10 (1:3 mixture). Use brush or broom to work it in to allow deeper penetration. Let stand for 15 to 20 minutes. Now spray it off with a forceful stream of water from a garden hose.

Floors (linoleum, cork, rubber, asphalt, porcelain, vinyl, tile): Unwaxed surfaces - Use Super 10 (1:10 mixture) with warm water. Apply to floor with cloth or mop. Allow time to soak if floor is extremely soiled. Wipe clean. Rinse with clean warm water. Waxed surfaces - Note: Super 10 is not recommended for cleaning waxed floors as one of its uses is to remove wax. For cleaning waxed floors, use one cap of undiluted LDC to 4 - 5 litres water.

Laundry (spot cleaning): Spray Super 10 (1:10 mixture) on garments (collars etc) before putting into washing machine, allow time to penetrate and loosen soils. Place garment in washing machine with other clothes to be washed (a squirt of LDC 1:3 into the 1:10 Super 10 spray helps to remove the body fats from collars and cuffs). Note: Mix Super 10 with distilled water when spot cleaning dry cleanables to prevent water ring.

Mildew, Refrigerators or Showers: Use Super 10 (1:3 mixture) depending on degree of soiling. For easy cleaning, allow to stand for a few minutes after spraying with solution.

GNLD's HomeCare products lead the world in their efficiency, value and environmental friendliness. Experience the GNLD Difference and make those cleaning jobs you don't like doing that much easier!
